

Necessary water cleanliness for ChromeFX

Where available we recommend the use of 1 carbon tank DICAR0160FSP and 2 Mix bed type 1 DIMB10160FSP. These are all US Filter products.

These tanks are designed to achieve a water purity of 16-17 MEG OHMS or .005 PPM. Where these tanks are not available try to achieve this purity by Deionization or distillation.

US Filter can be contacted at (800) 466-7873. They are a world wide company you should be able to get service in your area.
